COLOR**ID**
MOBILE SOLUTION

ColorID Mobile is built on the pillars of our core values:

Flexibility, Affordability, Secure, and Open Connectivity.

Fully integrated with HID Mobile Access, ColorID Mobile

allows your institution to migrate to mobile at your own pace.

The ColorID Mobile platform includes cloud-based software that is fully integrated with HID Mobile Access for mobile credential provisioning and management. This approach supports a practical mobile migration strategy, as it can also be expanded to a full identity management system including card issuance and support for visitor management.

The platform can be connected to existing third-party systems using standard APIs, data connectors, and webhooks. It is designed to be configured and launched rapidly, allowing campus personnel to use their mobile phones for door and other system access, such as payments, parking, and recreational facilities.

ColorID can assist in helping your organization build out your own mobile credential management solution giving you the flexibility to choose how you create, issue and manage mobile credentials across your campus.

Contact ColorID today to set up a discovery call, request a demo and learn more about how you can successfully deploy mobile access.

What is it?

- **Secure. Regardless of the chosen modality (BLE or NFC), ColorID's Mobile Solution, powered by HID Mobile Access credentials, uses over-the-air communication with session-based keys, secured, signed, and encrypted by AES 128/SHA-256.**
- **Open platform that issues and manages mobile credentials.**
- **Evolve as technology and industry move to the future.**
- **Move at your own pace, as your budget allows.**
- **Connect to third-party systems using standard APIs, connectors, and webhooks.**
- **Launch rapidly through built-in configurations.**
- **Expand! ColorID Mobile can provide full identity management, including ID cards.**
